Subject: ROBA-servostop changeover from AWG20 to AWG24 strands

Dear mayr partner,

please be informed that we will change the strands at all standard ROBA-servostop Cobot from AWG20 to AWG24. This will bring further advantage in processing and is technically completely sufficient. This change is also valid for standard ROBA-servostop Classic up to size 80. ROBA-servostop Classic sizes 90 and bigger will remain with AWG20 strands. Drawings are currently being revised and will be provided as soon as available.

BR
